ADS & HANCOR PIPE ALLOWED IN PUBLIC STORM SEWERS, STREET PAVEMENT CROSSINGS AND PUBLIC RIGHT-OF-WAYS

ENGINEERED TO OUTPERFORM

Superior Engineering:
ADS and Hancor produce N–12® and BLUE SEAL® superior HDPE pipe that provides the strength needed for tough applications. Not only does it offer the best watertight joint in the industry, but it offers abrasion resistance and won’t rust or corrode like concrete or steel.

Advanced Drainage Applications:
HDPE pipe and fittings are used for cross drains, side drains, storm sewers, culverts, landfills and other installations across the country. Pipe and fittings are available in a wide range of sizes from 4" to 60" diameters for flexibility in all your projects.

High Performance Joints:
The watertight joints on N–12 and BLUE SEAL pipe do not require any extra couplers, grout or other sealants due to the patented, factory-installed gaskets. The integral bell and spigot joints on these pipes improve the tolerance control and integrity of the watertight seal.

In April 2008, Metropolitan St. Louis Sewer District completed their investigation of ADS/Hancor pipe 12”-24” diameter sizes. With successful installations and evaluations, the use of ADS/Hancor pipe will be allowed based on meeting AASHTO M-294 Type S, or ASTM F-2306 with pipe joints meeting the performance requirements of ASTM D-3212.

This pipe will be allowed for public storm sewers and for perpendicular street pavement crossings. The pipe will also be allowed in public Right-of-Ways parallel to, but not under street pavement.

Easy Installations:
The rugged, lightweight design of N–12 and BLUE SEAL makes them easier and more cost effective to install. They require fewer people, less time and less heavy equipment to install compared to reinforced concrete. All of these advantages add up to lower installation costs.

Outstanding Value:
N–12 and BLUE SEAL have many performance advantages over traditional pipe…at a fraction of the cost.
SPECIAL ANNOUNCEMENT:
ST. LOUIS MSD APPROVES ADS & HANCOR PIPE
